

Agentic AI - Phase-By-Phase Implementation

Your Project-Based Learning Roadmap (Rebuilt)

We'll build your **Competitive Intelligence Platform** step-by-step.

PHASE 1 — "Make It Alive" (Week 1-2)

Goal:

👉 Your system should **DO something real**

Build THIS:

| "Enter company name → get latest news summary"

Concepts (ONLY what you need):

- Python basics (only if needed)
 - API calling (`requests`)
 - Basic LLM usage (OpenAI / local)
-

Tasks:

- Fetch news (API or scraping)
 - Send to LLM
 - Print summary
-

👉 Output:

Input: Tesla
Output: Summary of latest news

Why this matters:

You just built your **first AI pipeline**.

PHASE 2 — “Make It Smart” (Week 3–4)

Goal:

👉 Add **memory + structure**

Build:

| “System remembers past data + compares changes”

Learn:

- Embeddings (VERY IMPORTANT)
- Vector DB (Chroma local)
- Basic RAG

Tasks:

- Store news in vector DB
- Avoid duplicate news
- Retrieve past info

👉 Now your system:

- doesn't forget
- starts becoming intelligent

PHASE 3 — “Make It an AGENT” (Week 5–6)

Goal:

👉 Convert pipeline → agent

Build:

| “Agent decides what to do”

Learn:

- What is an agent (ReAct)
 - Tool calling
 - Basic planning
-

Tasks:

- Agent decides:
 - fetch news
 - summarize
 - store
 - Add 2–3 tools
-

👉 Now it's no longer a script

👉 It's an **agent**

PHASE 4 — “Multi-Agent System” (Week 7–9)

Goal:

👉 Multiple agents working together

🔥 Build:

- News Agent
 - Social Agent
 - Summary Agent
-

🧠 Learn:

- LangGraph OR CrewAI (pick one first)
 - Agent orchestration
-

🔧 Tasks:

- Agents communicate
 - Combine outputs
-

👉 Now you have:

| Real “agentic AI system”

🧩 PHASE 5 — “Make It a PRODUCT” (Week 10–12)

🎯 Goal:

👉 Something you can SHOW

🔥 Build:

- Streamlit dashboard
 - Input competitor
 - Show insights
-

Learn:

- FastAPI (basic)
 - UI (Streamlit)
 - Scheduling (cron)
-

PHASE 6 — “Make It REAL” (Week 13+)

Goal:

 Production-level system

Add:

- Redis (cache)
 - PostgreSQL
 - Deployment (Railway)
-

DAILY SYSTEM (for your focus problem)

You don't need motivation. You need structure.

2-Hour Rule

Every day:

- 30 min → learn
 - 90 min → build
-

Session Structure

1. Start with:

| “Today I will build X”

1. End with:

| "I pushed something"

Golden Rule:

 **No zero days**

Even 10 minutes counts.

Important Mental Reset

You said:

| "I want to get back my focus"

Let's be real:

Focus doesn't come first.

 **Action creates focus**

What You Should NOT Do

-  Watch endless tutorials
 -  Learn all frameworks
 -  Try to be perfect
 -  Train your own model (for now)
-

What You SHOULD Do

-  Build ugly versions
-  Break things
-  Google a lot
-  Improve gradually
